Subject: Re: EPA Testing

[REDACTED], spoke with Range and they are making improvements to the tank farm containment. During excavation soil field test were higher than background soil. The areas where the trucks unload was where they saw the spikes, indicating the truckers may have got sloppy or spilled something and didn't report. As a precaution they are removing all of the soil before re lining the tanks containment. I asked Range for all the disposal analysis so that I can see what happened.
